Research & Planning

Compensation for Education: A Comparison of Wages and Employment by Educational Requirement

by: Aubrey Kofoed, Research Analyst

An applicant for a position usually must meet requirements set forth by employers including job skills and education. Job seekers want to be compensated for education they have attained and employers want to attract talented employees in turn by giving fair compensation for education. With a higher education often comes higher wages, but the analysis discussed in this article found that education is not valued the same across industries, nor do wages necessarily increase with each level of education in Wyoming. A larger percent of jobs in Wyoming require no more than a high school diploma compared to Colorado and the national average, and the state offers a smaller overall reward for attaining a bachelor's degree.

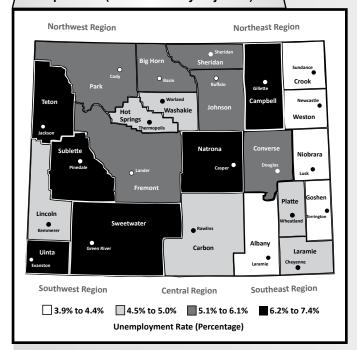

Industry of employment and educational attainment play a large role in determining wages for employees. A higher education leads to higher overall wages, according to Berger and Fisher (2013), who also found that an increase in well-educated workers leads to strengthened economies. Previous research from the Research & Planning (R&P) section of the Wyoming Department of Workforce Services indicated that a portion of the workforce benefited from postsecondary education without a

degree. For example, women who pursued a nursing assistant certificate achieved higher wages than their peers who did not attain a certificate (Faler, 2020). In 2018, employees hired to work in occupations that required some postsecondary education were paid a median hourly wage of \$17.81, compared to \$16.48 for employees working in occupations that required a high school diploma (Knapp & Moore, 2020). Additional findings

(Text continued on page 3)

- Total nonfarm employment increased by 10,800 jobs or 4.2% from April 2020 to April 2021. ... page 20
- Wyoming had 5,806 initial Unemployment Insurance claims in April 2021, down from a record 20,485 in April 2020 (-14,679, or -71.7%). This marked the second consecutive month of over-the-year decline in initial claims in Wyoming. ... page 22

by Knapp showed that occupations that require a college education paid more than occupations that require a high school diploma.

The Occupational and **Employment Statistics** (OES) program captures employment and wages for occupations across the U.S. and for each state. The U.S. Bureau of Labor Statistics (BLS, 2021) provides information about education and training requirements for occupations for projections data. This information can be used to determine wages and employment for specific education levels in Wyoming. It is important to note that for the purposes of this article, the researcher assumed that employees worked in an occupation that matched their highest education attained.

The research discussed in this article compares employment and wages across industries and educational requirements in Wyoming, Colorado, and the U.S. An examination of employment and wages for occupations by level of education, with the additional context of industry of employment, can shed light on the

reward in terms of compensation for pursuing education and the value of education across industries and states.

In 2019, jobs requiring any type of postsecondary education made up a smaller portion of total jobs in Wyoming than all other states in 2019 except Louisiana (see Table 1). In total, 60.7% of all jobs in Wyoming required a high school diploma or less, while the remaining 39.3% required some form of postsecondary education. In surrounding states, occupations requiring some postsecondary education ranged from 43.3% of jobs in Montana to 50.8% of all jobs in Utah.

This article discusses employment and the weighted average wage in occupations by educational requirements for the state and by selected industries. A comparison of wages and employment was done between Wyoming, Colorado, and the U.S. for all industries and the mining, construction, manufacturing, and education and health services industries as identified by the North American Industry Classification System (NAICS). This information can be helpful to job

seekers in determining career paths based on their education goals.

This article includes several figures that were created to illustrate the differences in employment distribution and wages by educational requirement as discussed in the article. The data used to create those figures will be available online at https://doe.state.wy.us/LMI/backiss.htm#0621

Key findings from this research are presented in italics in the results section of this article.

Methodology

Data from the OES program were analyzed for this report, along with educational requirements from the U.S. Bureau of Labor Statistics. A weighted average was used to compare wages between Wyoming, Colorado, and the U.S. in order to account for the difference in the number of occupations within each industry and the inconsistent distribution of wages across occupations with the same education requirements. Occupations with non-disclosable employment were excluded from the analysis.

The percentage of employment in occupations with a specific educational requirement was used to make a comparison between the workforces of the areas. Occupations with no information for education requirements were excluded from the analysis.

The four industries discussed in this article were selected based on their portion of wages in Wyoming and the difference of employment compared to Colorado, based

on data from the Quarterly Census of Employment and Wages (QCEW). Wyoming was ranked among the other 50 states by percentage of employment in occupations requiring a high school diploma or less. The education category high school diploma or less included occupations requiring a high school diploma or having no formal education credential requirement.

Results

Wyoming had the largest proportion of employment in occupations requiring a high school diploma or a master's degree compared to Colorado and the U.S.

Wyoming had a larger proportion of employment that required a high school diploma than any other educational requirement: 44.6% of total employment in occupations requiring a high school diploma, 20.7% in occupations requiring a bachelor's degree, and 16.1% in occupations requiring no formal education (see Figure 1, page 5). Wyoming had the largest proportion of employment in occupations that required a high school diploma compared to Colorado (39.7%) and the U.S. (36.7%). Wyoming had a smaller percentage of employment in occupations with no formal education requirement than the U.S. (25.3%) but larger than Colorado (11.7%). Wyoming had the smallest percentage of employment in occupations requiring a bachelor's degree compared to Colorado (32.2%) and the U.S. (22.5%).

Occupations requiring a master's degree made up the smallest proportion of all occupations for Wyoming (2.3%), Colorado (1.9%), and the U.S. (1.7%). While

(Text continued on page 6)

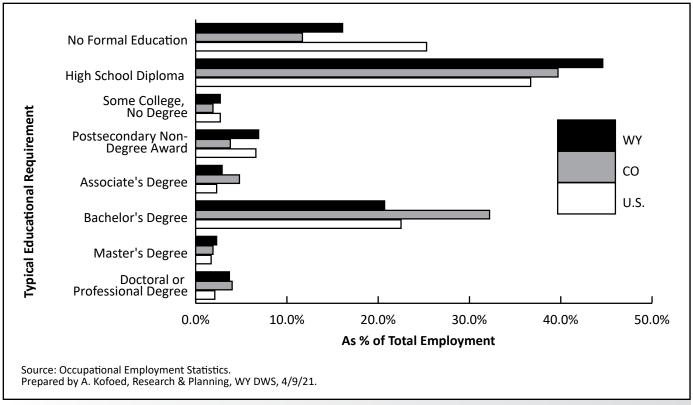

Figure 1: Educational Requirement as a Percent of Total Employment in Wyoming, Colorado, and the U.S., 2019

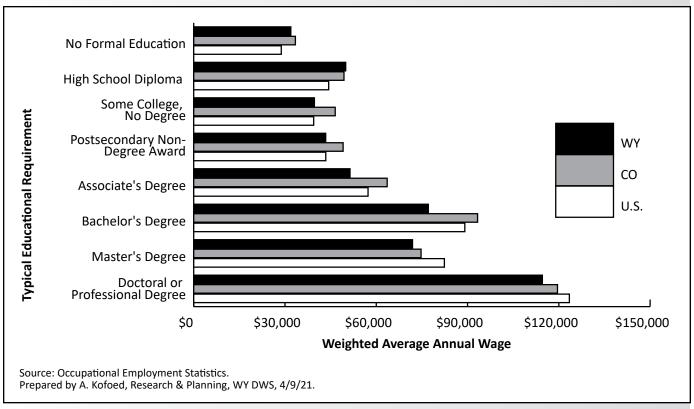

Figure 2: Weighted Average Annual Wage by Educational Requirement in Wyoming, Colorado, and the U.S., 2019

(Text continued from page 4)

the proportion of occupations requiring a master's degree in Wyoming was the smallest in the state, Wyoming had a larger percentage of occupations requiring master's degrees than the U.S. and Colorado.

Occupations that required the most education paid more than occupations that require the least education; however, not all increases in education came with increases in wages.

The distribution of wages in Wyoming was similar to Colorado and the U.S. across educational requirements. The lowest weighted average annual wages in Wyoming were in occupations that require no formal education (\$31,916), and the highest were paid in occupations requiring a doctorate or professional education (\$114,593; see Figure 2, page 5).

Another pattern shared among Wyoming, Colorado, and the U.S. was that not all increases in educational requirements came with an increase in wages. Occupations that required some college, no degree paid less than occupations that required only a high school diploma. In Wyoming, occupations requiring some college with no degree paid \$10,289 less than occupations requiring a high school diploma. There was also a decrease in wages for occupations requiring a master's degree compared to those requiring a bachelor's degree; occupations in Wyoming that required a master's degree paid \$5,200 less than occupations requiring a bachelor's degree.

Wyoming had the smallest proportion of employment and the lowest weighted average annual wage in occupations that required a bachelor's degree.

In Wyoming, Colorado, and the U.S. the largest percentage of employment that required a degree was in occupations that required a bachelor's degree. Wyoming had the smallest dollar increase in weighted average annual wages (\$45,195) for working in occupations requiring a bachelor's degree (\$77,111) compared to occupations that required no formal education (\$31,916). In contrast, the differences from no formal education to a bachelor's degree were \$59,870 in Colorado and \$60,319 in the U.S.

Wyoming had the lowest weighted average annual wage compared to Colorado and U.S. for occupations that required any education beyond some college, no degree. In contrast, in occupations that required a high school diploma or equivalent, Wyoming paid the highest wage (\$49,957) compared to Colorado (\$49,930) and the U.S. (\$44,357).

Wyoming had lower wages in 12 industries compared to Colorado and the U.S.

Wyoming had the lowest weighted average annual wages in 12 of 19 industries (see Figure 3, page 7) compared to Colorado and the U.S. Wyoming only paid higher than both Colorado and the U.S. in agriculture (NAICS 11). However, there was only one occupation with disclosable employment data in Wyoming in agriculture (other occupations do not meet BLS publication requirements), so that may not be a good industry for comparison.

In Wyoming, the highest weighted average annual wages were found in utilities (NAICS 22; \$78,043), mining (NAICS 21; \$76,311), and management of companies & enterprises (NAICS 56; \$75,269). The

(Text continued on page 8)

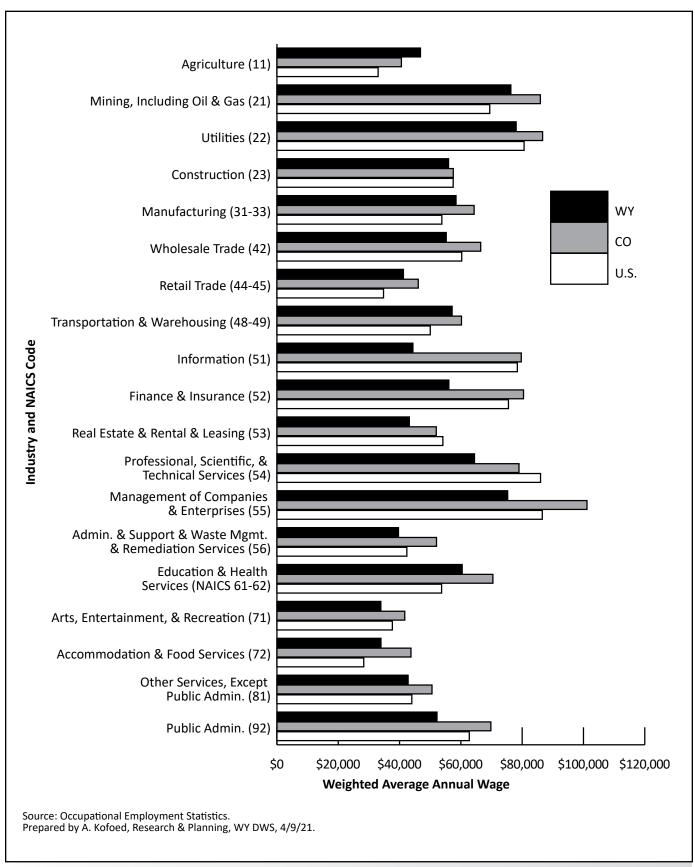

Figure 3: Weighted Average Annual Wage by Industry in Wyoming, Colorado, and the U.S., 2019

(Text continued from page 6)

highest weighted average annual wages for Colorado and the U.S. were both found in management of companies & enterprises (\$101,144 and 86,562, respectively).

Though Wyoming had lower weighted average annual wages in the majority of industries, Wyoming had the highest average annual wage nationally for 17 of the 508 occupations in the state. Of those 17 occupations, 14 required a high school diploma or less (see Table 2). The majority of those occupations were production occupations often found in mining (U.S. Bureau of Labor Statistics, 2021), such as derrick operators, oil & gas (\$58,890) and continuous mining machine operators (\$80,700). The average annual wage of

those 14 occupations requiring a high school diploma or less (\$66,269) was greater than the average wage for most industries in Wyoming.

Mining (NAICS 21)

The mining sector contributed approximately 18.4% of all wages in Wyoming in 2019 (Research & Planning, 2020).

The distribution of jobs by educational requirement in Wyoming's mining sector was quite different than those in Colorado and the U.S. (see Figure 4, page 9) In Wyoming, for example, occupations requiring a high school diploma or equivalent accounted for 72.9% of all

(Text continued on page 10)

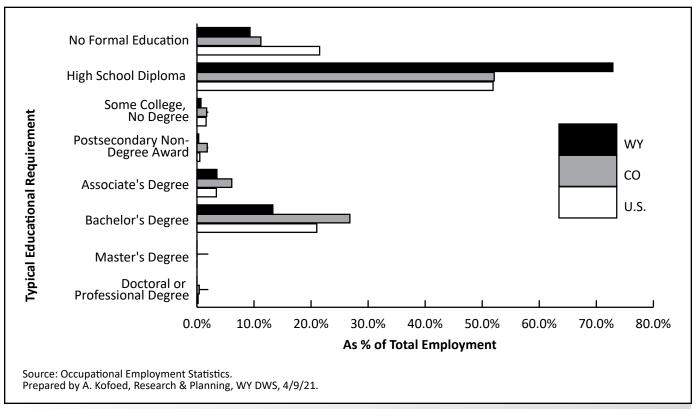

Figure 4: Educational Requirement as a Percent of Total Employment in Mining (NAICS 21) in Wyoming, Colorado, and the U.S., 2019

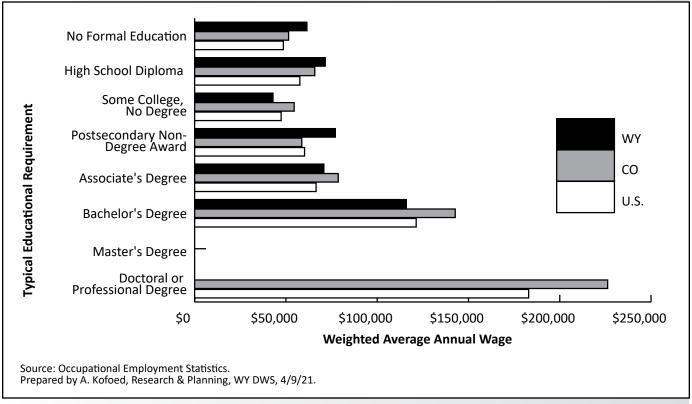

Figure 5: Weighted Average Annual Wage by Educational Requirement in Mining (NAICS 21) in Wyoming, Colorado, and the U.S., 2019

(Text continued from page 8)

employment with an average wage of \$71,559, and those requiring a bachelor's degree accounted for 13.3% with an average wage of \$115,963. In Colorado's mining sector, occupations requiring a bachelor's degree accounted for twice as much (26.8%) as Wyoming and had an average wage of \$142,743. Nationally, occupations requiring a bachelor's degree made up 21.0% of mining employment with an average wage of \$121,353.

Wages in Wyoming's mining sector generally followed the same trend as Colorado and the U.S in that the lowest wages were paid to occupations with no formal educational requirement and the highest wages were paid to occupations that required the highest levels of education (see Figure 5, page 9). The highest wages were paid to occupations that required a bachelor's degree; in Wyoming, there were no data available for occupations in mining that required a doctorate or professional degree.

Construction (NAICS 23)

In 2019, construction contributed 12.5% of Wyoming's total wages (Research & Planning, 2020). Construction generally showed the same trends as overall wages in the state in terms of educational requirements, with wages for occupations that required no formal education considerably lower than those requiring a bachelor's degree.

The largest percent of occupations in construction in Wyoming were those that required a high school diploma or equivalent (see Figure 6, page 11). Nearly every two in five jobs (38.4%) in construction required a high school

diploma. While this was the highest percentage by education level in Wyoming, it was lower than both Colorado and the U.S., where more than half of all occupations in construction required a high school diploma. The largest difference was found in occupations that required a postsecondary non-degree award, with 15.6% of all employment in Wyoming compared to 5.8% in the U.S. and 2.3% in Colorado.

The lowest paid occupations in Wyoming's construction sector were those that required some college, no degree (\$37,660; see Figure 7, page 11). In contrast, occupations with no formal educational requirement paid the least in Colorado (\$41,119) and the U.S. (\$43,091). Wyoming's highest paid occupations were those that required a bachelor's degree (\$93,927), associate's degree (\$78,940). and a high school diploma or equivalent (\$56,855). Wyoming had a larger increase (\$52,735) from occupations that required no formal education to those requiring a bachelor's degree than Colorado (\$44,540).

Manufacturing (NAICS 31-33)

Occupations requiring a high school diploma or equivalent made up a greater proportion of manufacturing employment in Wyoming (68.1%) than in the U.S. (62.1%) and Colorado (43.8%; see Figure 8, page 13). These occupations also had a higher wage in Wyoming (\$54,448) than in Colorado (\$45,289) and the U.S. (\$42,820). Occupations requiring a bachelor's degree made up a substantially smaller proportion of employment in manufacturing in Wyoming (12.3%) than in Colorado (30.2%) and the U.S. (18.4%).

(Text continued on page 12)

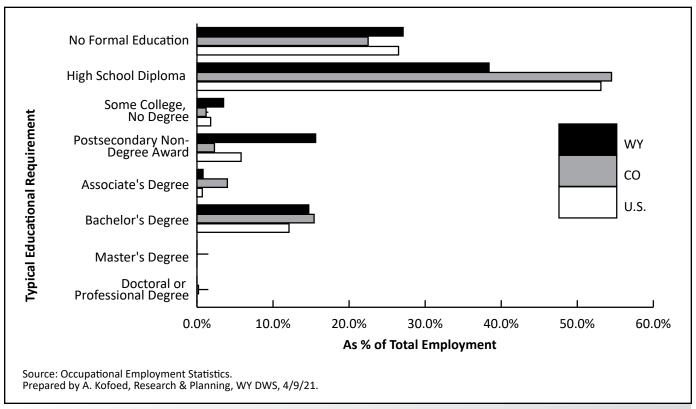

Figure 6: Educational Requirement as a Percent of Total Employment in Construction (NAICS 23) in Wyoming, Colorado, and the U.S., 2019

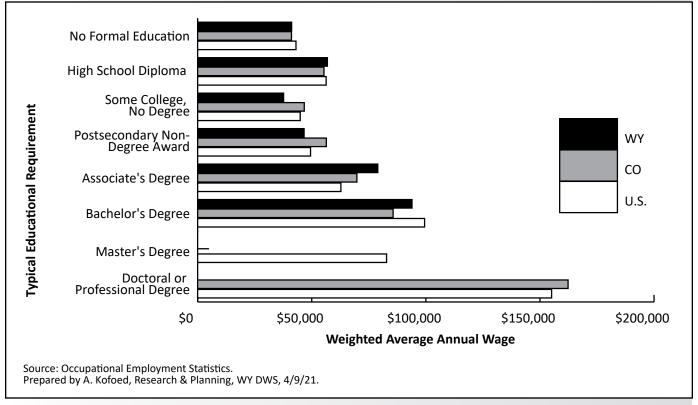

Figure 7: Weighted Average Annual Wage by Educational Requirement in Construction (NAICS 23) in Wyoming, Colorado, and the U.S., 2019

(Text continued from page 10)

The lowest wages in Wyoming's manufacturing sector were those with no formal educational requirement (\$38,356; see Figure 9, page 13). However, this wage was higher than similar occupations in Colorado (\$32,859) and the U.S. (\$32,159). Wyoming's manufacturing sector also had higher wages for jobs requiring a high school diploma (\$54,448) or an associate's degree (\$76,917) than Colorado or the U.S.

Education & Health Services (NAICS 61-62)

The distribution of wages and employment was more consistent between Wyoming, Colorado, and the U.S. in education & health services compared to the industries mentioned above. However, the distribution of jobs by educational requirement was quite different.

Occupations requiring a bachelor's degree made up a greater percentage of total employment in Colorado (34.1%) and the U.S. (32.8%) than in Wyoming (27.3%; see Figure 10, page 14). Wyoming had a greater percentage of jobs requiring a master's degree (9.3%) than the U.S. (6.0%) and Colorado (5.0%).

Wages in Wyoming were consistently lower than those in Colorado for each educational requirement, with the exception of doctoral or professional degree, where Wyoming had a higher average wage (\$118,009) than Colorado (\$113,643; see Figure 11, page 14).

Discussion

In the industries discussed above,

Wyoming often had lower weighted average annual wages than Colorado and the U.S. Within those industries, Wyoming lacked, or had a smaller portion of, occupations that required education beyond high school, especially those that required a college degree. This lack of occupations requiring a higher education led to overall lower wages.

Jobs within the mining industry that only require a high school diploma or equivalent paid a higher wage than the overall weighted average wage in the majority of all other industries in Wyoming. Within the mining sector, Wyoming also had a smaller reward (increase in pay) for attaining a bachelor's degree. Construction wages followed a similar pattern, in that occupations that required less education had a higher wage than occupations that require some college or even a postsecondary education with no degree. The low demand in occupations requiring a college degree and the high rate of compensation for occupations requiring only a high school diploma may leave little incentive to pursue higher education to work in the mining or construction industries. As mentioned above, manufacturing followed a similar wage pattern as mining and construction. Wyoming had a smaller wage increase for occupations requiring a higher education than Colorado and the U.S.

The education & health services industry exhibits the typical Wyoming wage pattern for education requirements, but more closely resembles Colorado than the other three industries previously discussed. This was also the only industry of the four that reflected a similar diversity of occupations by educational requirement. While the employment patterns were

(Text continued on page 15)

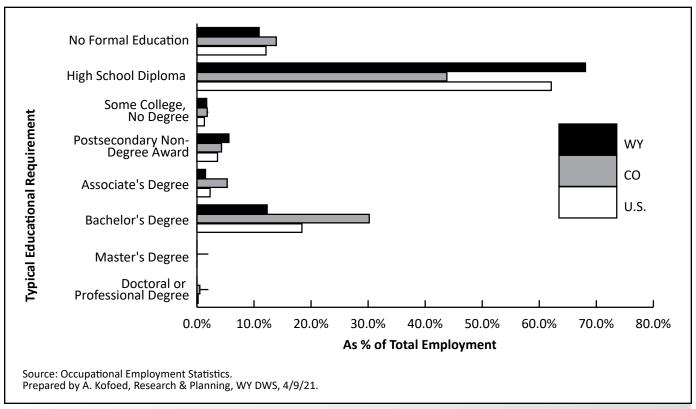

Figure 8: Educational Requirement as a Percent of Total Employment in Manufacturing (NAICS 31-33) in Wyoming, Colorado, and the U.S., 2019

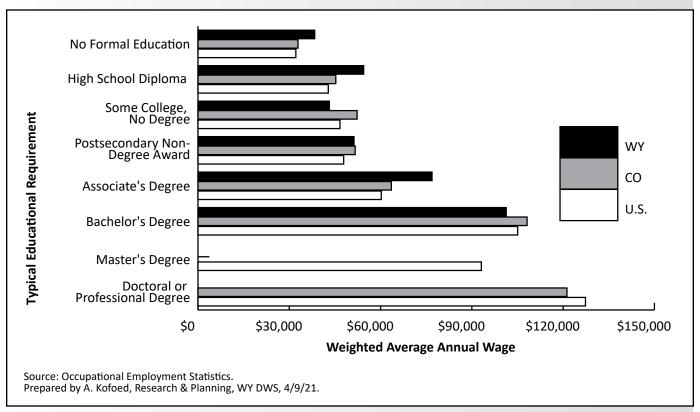

Figure 9: Weighted Average Annual Wage by Educational Requirement in Manufacturing (NAICS 31-33) in Wyoming, Colorado, and the U.S., 2019

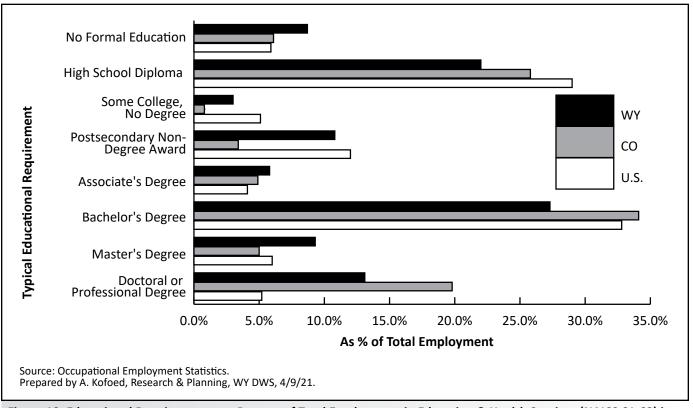

Figure 10: Educational Requirement as a Percent of Total Employment in Education & Health Services (NAICS 61-62) in Wyoming, Colorado, and the U.S., 2019

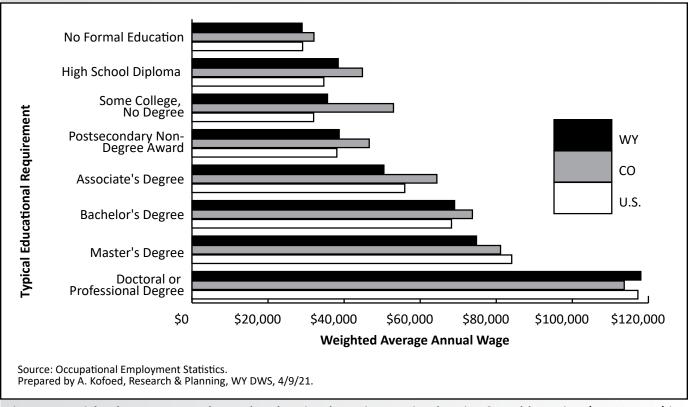

Figure 11: Weighted Average Annual Wage by Educational Requirement in Education & Health Services (NAICS 61-62) in Wyoming, Colorado, and the U.S., 2019

(Text continued from page 12)

not exactly the same for Colorado and Wyoming, the difference between wages for occupations that required no education and occupations that required a bachelor's was more similar to Colorado and the U.S. than in the other selected industries.

The results of this analysis indicate that industries with a greater proportion of jobs requiring postsecondary education tend to have higher wages. Though Wyoming pays higher wages relative to Colorado and the U.S. for occupations that require less education, the absence of occupations that require higher education seem to make overall industry wages less competitive.

As mentioned in the introduction of this article, it is assumed that employees work in an occupation that matches their highest level of education. The data do not contain information to show if employees that work in an occupation that requires a high school diploma have a higher education, such as a post-secondary certificate or a college degree.

All of the above industries deviate from the theory that higher education leads to higher wages. Construction and mining specifically often paid higher wages to occupations that require a high school diploma than occupations that require a post-secondary credential. Subsequent research could determine if the irregular pattern of wages is limited to specific industries, or if similar patterns exist in other industries within Wyoming. Neither the subsectors of industry nor the occupational diversity were explored in the scope of this paper. Further research could shed light on the reason for difference in wages for occupations requiring less education and why some industries paid more wages for post-secondary education and others did not.

Conclusion

In the research presented in this article, Wyoming had the second lowest rate of employment in occupations that required education beyond a high school diploma in the nation. Wyoming had a high rate of employment in occupations that required a high school diploma, and tended to pay higher weighted average annual wages for those occupations. Job seekers may be pleased to know that high wages can be found in Wyoming for those that do not wish to seek education beyond high school. For those that choose to seek education beyond a high school diploma, the economic reward can be disproportionate across industries.

New from R&P: 2021 Wyoming Workforce Annual Report

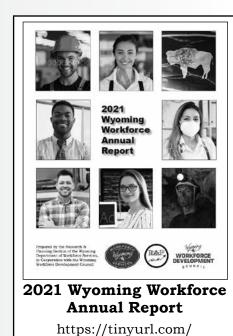

he 2021 Wyoming Workforce Annual Report from the Research & Planning (R&P) section of the Wyoming Department of Workforce Services, in partnership with the Wyoming Workforce Development Council, provides a wealth of information on Wyoming's labor market. The new report is available online at https://doe.state.wy.us/LMI/ annual-report/2021/Annual_ Report_2021.pdf.

The annual report's authors looked at Wyoming's labor market in 2020 by using data from numerous sources, including the Quarterly

Census of Employment and Wages (QCEW), Wyoming wage records, Local Area Unemployment Statistics (LAUS), Unemployment Insurance claims, and more.

Wyoming endured unprecedented job losses in 2020, due in large part to the COVID-19 pandemic and rapidly declining energy prices. Wyoming's average monthly employment decreased more by than 16,000 jobs (-5.9%) from 2019 to 2020.

In addition, a record 43,630 unemployed workers received UI benefits in 2020, a 231.9% increase from 2019.

99dnec3k

Wyoming Unemployment Rises to 5.4% in April 2021

by: David Bullard, Senior Economist

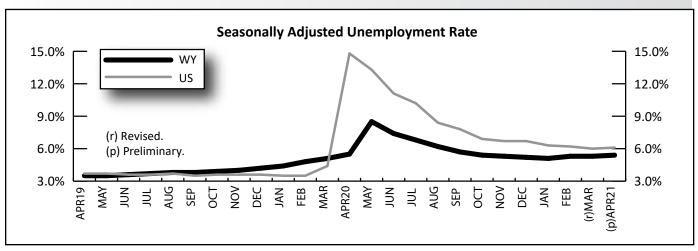

he Research & Planning section of the Wyoming Department of Workforce Services reported that the state's seasonally adjusted¹ unemployment rate increased slightly from 5.3% in March to 5.4% in April. However, Wyoming's unemployment rate was much lower than the current U.S. rate of 6.1%. Wyoming's labor force, the sum of employed and unemployed individuals, increased by 5,141 people, or 1.8% from a year earlier.

From March to April, unemployment rates followed their normal seasonal pattern and fell in most counties around the state. Unemployment rates often decrease in April as seasonal job gains occur in construction, retail trade, and professional & business services. The largest unemployment rate decreases were seen in Park (down from 5.9% to 5.1%), Big Horn (down from 6.1% to 5.3%), and Johnson (down from 5.9% to 5.2%) counties. Teton County was the exception. Its unemployment rate rose from 4.2% in March to 7.0% in April as the ski season ended.

Seasonal adjustment is a statistical procedure to remove the impact of normal regularly recurring events (such as weather, major holidays, and the opening and closing of schools) from economic time series to better understand changes in economic conditions from month to month. From April 2020 to April 2021, jobless rates rose in 16 counties and fell in seven counties. The largest increases occurred in Converse (up from 4.1% to 6.1%), Niobrara (up from 2.6% to 4.1%), Big Horn (up from 3.9% to 5.3%), and Uinta (up from 5.5% to 6.3%) counties. Unemployment rates fell in Teton (down from 12.5% to 7.0%), Park (down from 5.9% to 5.1%), Laramie (down from 5.4% to 4.6%), and Johnson (down from 5.9% to 5.2%) counties.

Natrona County had the highest unemployment rate in April at 7.4%. It was followed by Sublette County at 7.1%, Teton County at 7.0%, and Sweetwater County at 6.8%. The lowest unemployment rates were found in Weston County at 3.9% and Crook and Albany counties, each at 4.0%.

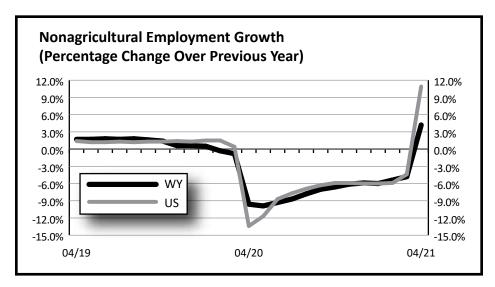

Total nonfarm employment in Wyoming (not seasonally adjusted and measured by place of work) rose from 257,100 in April 2020 to 267,900 in April 2021, an increase of 10,800 jobs (4.2%). Nonfarm employment was unusually low in April 2020 because of widespread economic disruptions related to the COVID-19 pandemic.

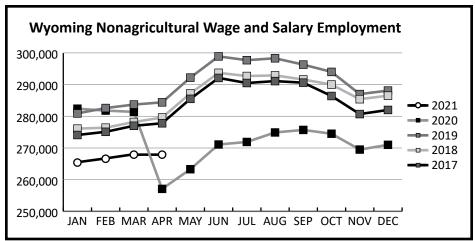

Current Employment Statistics (CES) Estimates and Research & Planning's Internal Esimates, April 2021 by: David Bullard, Senior Economist

Industry Sector	Research & Planning's Internal Estimates	Current Employment Statistics (CES) Estimates	N Difference	% Difference
Total Nonfarm	262,715	267,900	5,186	1.9%
Natural Resources & Mining	13,824	14,800	977	6.6%
Construction	19,689	18,700	-989	-5.3%
Manufacturing	8,732	9,700	968	10.0%
Wholesale Trade	7,146	7,100	-46	-0.6%
Retail Trade	27,563	28,900	1,337	4.6%
Transportation & Utilities	13,680	14,300	620	4.3%
Information	2,691	2,800	109	3.9%

⁽p) Preliminary. (r) Revised. (b) Benchmarked.

Note: Production worker hours and earnings data have been dropped from the Economic Indicators page because of problems with accuracy due to a small sample size and high item nonresponse. The Bureau of Labor Statistics will continue to publish these data online at http://www.bls.gov/eag/eag.wy.htm.

¹Metropolitan Statistical Area.

Wyoming County Unemployment Rates

by: Carola Cowan, BLS Programs Supervisor

Natrona County had the highest unemployment rate in April at 7.4%, followed by Sublette County at 7.1%, Teton County at 7.0%, and Sweetwater County at 6.8%.
