Vol. 55 No. 5

Wyoming is expected to add 7,333 jobs from 2017 to 2019, according to the most recent short-term projections from the Research & Planning section of the Wyoming Department of Workforce Services. The largest jobs gains are projected in mining (2,410 jobs) and leisure & hospitality (1,643). Projections are available online at http://doe.state.wy.us/LMI/projections.htm.

he Research & Planning (R&P) section of the Wyoming Department of Workforce Services produces short-term employment projections by industry and occupation, which are available online at http://doe.state.wy.us/LMI/projections.htm. New short-term projections from R&P indicate job growth is projected to occur in all sectors except information and public administration.

Industry Projections

Industries are classified according to the North American Industry Classification System (NAICS). The industry projections are developed at the three-digit NAICS subsector level and then summed to the two-digit major industries shown in Table 1.

The short-term industry projections indicate that Wyoming's employment is expected to grow by 7,333 jobs (2.7%) from second quarter 2017 (2017Q2) to second quarter 2019 (2019Q2). At the two-digit NAICS level, job growth is forecast for all sectors, with exception of information (NAICS 51) and public administration (NAICS 92).

As shown in Table 1 (see page 3), the largest job growth is expected in mining (NAICS 21; 2,410 jobs, or 12.5%) and leisure & hospitality (NAICS 71-72; 1,643, or 4.5%). Wyoming's mining sector has

Department of Workforce Services Nondiscrimination Statement

The Department of Workforce Services does not discriminate on the basis of race, color, religion, national origin, sex, age, or disability. It is our intention that all individuals seeking services from our agency be given equal opportunity and that eligibility decisions be based upon applicable statutes, rules, and regulations.

Mission statement available at: http://doe.state.wy.us/LMI/mission.pdf.

ISSN 0512-4409

(Text continued from page 1)

historically been volatile, with much of the industry dependent on oil & gas extraction. Employment in mining bottomed out in 2016Q3 with slightly fewer than 18,000 jobs, the lowest level in more than 10 years. Since then, however, mining has seen over-themonth increases in each of the six months prior to the base period used in these projections (2017Q2).

Projections are based on historic trends of how employment levels respond to market conditions. Oil prices are relatively favorable for Wyoming suppliers at this time, and therefore employment levels are expected to continue increasing. However, the global supply/demand situation could change abruptly.

Health care & social assistance (NAICS 62) is expected to grow modestly by 784 jobs (2.4%). Growth in this sector has been

tempered somewhat due to a decrease in Wyoming's population. This is also the reason that employment in educational services (NAICS 61) is expected to remain practically unchanged.

Occupational Projections

Occupations are classified using the Standard Occupational Classification (SOC) system. Short-term occupational projections show anticipated job growth and openings due to workers exiting the workforce or changing occupations through 2019Q2. Total openings are calculated by projected growth or decline (numeric change) in the number of jobs in a given occupation, plus the number of workers leaving the workforce (exits), plus the number of workers changing occupations (transfers). In almost all occupations, the total number of job openings is largely dictated by the number of workers leaving

Source: Wyoming Short-Term Projections, 2017-2019.

Prepared by P. Manning, Research & Planning, Wyoming DWS, 3/1/18.

the workforce and the number of workers changing occupations. The projected growth or decline is generally a small component of total openings.

For example, the occupational projections table shows that the number of cashiers (SOC 41-2011) in Wyoming is projected to grow from 6,813 in 2017Q2 to 6,941 in 2019Q2, a growth of 128, or 1.9%. However, an additional 1,291 openings are projected due to individuals exiting the occupation, and an additional 1,260 openings are projected due to transfers.

The total number of openings -- growth plus exits plus transfers -- is projected to be 2,679. The majority of projected openings from 2017-2019 are in jobs that require a high school diploma or less (73.1%). Jobs requiring a bachelor's degree account for the second largest proportion of projected openings (12.1%), followed by jobs requiring a postsecondary certificate (5.9%). Jobs requiring an associate's degree (2.0%), master's degree (1.2%), and doctoral or professional degree (1.0%) make up less than 5% of all projected openings.

Table 2 (see page 5) shows the top five occupations by total projected openings by educational requirement. Jobs associated with the food service and retail trade industry account for the largest number of total projected openings, such as cashiers (2,679 total openings), retail salespersons (2,603), waiters & waitresses (2,321), and combined food preparation & serving workers (2,026). Office clerks round out the top five with 1,597 openings.

Among occupations requiring a certificate, heavy and tractor-trailer truck drivers and nursing assistants are expected to have the most openings, with 1,597 and 745, respectively. Together, all occupations

requiring a certificate are expected to generate 4,315 job openings from 2017 to 2019 in Wyoming.

There are projected to be 1,454 job openings that require an associate's degree from 2017 to 2019. Three technician occupations are in the top five requiring an associate's degree, including geological & petroleum technicians (140 jobs), forest & conservation technicians (137), and chemical technicians (73). Preschool teachers and paralegals & legal assistants are expected to have 131 and 116 openings, respectively.

There are projected to be 8,848 job openings over the two years that require a bachelor's degree. General & operations managers are projected to have 967 openings. Two teaching-related occupations — substitute teachers and elementary school teachers — are expected to add 673 and 430 jobs, respectively. Registered nurses (658) and accountants & auditors (390) complete the top five.

Occupations requiring a master's degree are projected to have 867 total openings from 2017 to 2019. Three of the top five occupations are education-related: educational, guidance, school, & vocational counselors (131 openings); educational administrators, elementary & secondary school (66); and instructional coordinators (64). Mental health counselors and librarians are expected to have 83 and 69 openings, respectively.

Projections suggest there will be 728 total openings in occupations requiring a doctoral or professional degree. Lawyers are projected to have the most openings with 91, followed by postsecondary teachers (72), pharmacists (55), physical therapists (54), and postsecondary health specialties teachers (41).

Business Survival in Wyoming

by: Sherry Wen, Principal Economist

The March 2018 issue of Wyoming Labor Force Trends included a feature article on new business formation in Wyoming. This article provides a discussion on business survival in Wyoming at the employer size, regional, and industry levels.

Information about the prospects of a business surviving in a given industry and location can help individuals who are planning to open a business. This type of information also may help entities such as the Wyoming Business Council and other public and private funding sources for new ventures develop practical strategies to ensure greater return on investment when establishing a new firm.

Due to limited information on business transitions like selling, merging, and dividing, R&P only considers firm survival relative to the original owners in this research. Some firms may still operate but have changed ownership. Those firms are not included in survival counts.

Many factors could impact a firm's survivability, such as the supply and demand situation for a specific product or the service a firm provides, competition from similar businesses, government policies, supply of required labor, and location.

For this article, a firm is considered as having survived one year if it is still reporting employment and wage information to the Department of Workforce Services' Unemployment Insurance (UI) Tax Division. The one-year survival rate is calculated by dividing the number of one-year survivals by the total number of firms that reached their one-year anniversary date. The same method is used to define survival rates for two and three or more years. In order to obtain a general pattern of survival rates in Wyoming

and avoid variation in individual years, R&P used all records since the 1992Q4 that met the specific requirement for each survival rate.

Statewide, more than two-thirds (69.1%) of the new firms survived one year after opening and more than one-third (34.5%) were still active after five years (see Table 1, page 7). The survival rates get smaller as the number of years in business increases. Industries face different challenges in their operations, and their survival rates could vary widely. For example, among all private industries, 62.7% of new firms in health care & social assistance were still in business three years after opening, and only 36.4% in construction were still in operation three years after opening. Construction showed the lowest survival rates across all years. This may directly relate to the large portion of temporary projects such as roads, oil and gas pipelines, buildings, etc. More than half of all firms in agriculture (51.4%) and utilities (52.3%) survived five years after opening, followed by health care & social assistance (49.9%) and real estate & rental & leasing (45.8%). The private industries with the highest 10-year survival rates were utilities (34.7%), agriculture (34.6%), and health care & social assistance (33.8%).

A firm's location could be a very important factor to survivability. For example, 81.8% of firms in utilities survived three year in business in the northwest region, but only 33.3% survived three years in the northeast region (see Table 2, page

8). On the other hand, firms in agriculture showed the highest three-year survival rate in the central region (68.8%) compared with all other regions. Some industries had very similar three-year survival rates in all five regions of the state, such as construction, which ranged from 35.3% to 38.6%.

New firms' survival rates also varied largely by firm size. In general, large-sized firms had higher survival rates than the middle- and small-sized firms (see Figure 1, page 8). Firms that were started with only temporary employees showed the lowest survival rates. For example, 83.0% of all larger-sized firms were still in business one year after opening, and nearly half (47.9%) survived after five years. By comparison, approximately one-third (33.3%) of all initial temp hiring firms survived after one year,

and 16.6% survived after five years. Larger firms may have prepared more sufficiently than other sized firms from the beginning and had stronger competitive power.

Conclusion

Business survival rates get smaller as the number of years in business increases, as industries face different challenges in their operations. Larger firms (those with more than 20 employees) tend to have higher survival rates than smaller firms. Finally, businesses in industries such as agriculture, utilities, finance & insurance, real estate & rental & leasing, and health care & social assistance tend to have the highest survival rates in both the short-term and long-term.

Wyoming Unemployment Rate Falls to 3.9% in March 2018

by: David Bullard, Senior Economist

The Research & Planning section of the Wyoming Department of Workforce Services reported that the state's seasonally adjusted¹ unemployment rate fell from 4.0% in February to 3.9% in March, which was its lowest level in three years. Wyoming's unemployment rate was slightly lower than the March U.S. unemployment rate of 4.1%.

From February to March, most county unemployment rates held steady or decreased slightly. It is normal for unemployment rates to fall in March, as employment tends to increase in construction, government, and other sectors. The largest decreases were seen in Johnson (down from 4.9% to 4.3%), Natrona (down from 5.0% to 4.7%), and Laramie (down from 4.1% to 3.8%) counties. Unemployment rates rose slightly in Albany (up from 2.8% to 3.0%) and Weston (up from 3.7% to 3.9%) counties.

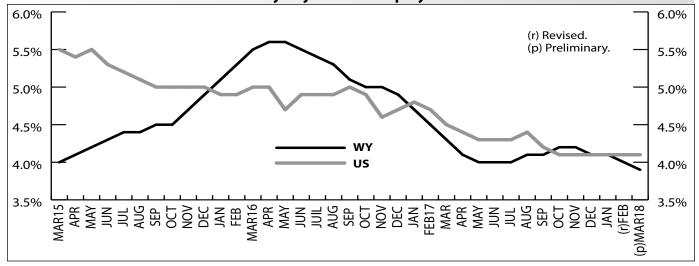

From March 2017 to March 2018, unemployment rates fell in 21 counties and rose in two counties. The largest decreases occurred in Sublette (down from 5.8% to 4.1%), Campbell (down from 5.7% to 4.2%), and Natrona (down from 6.0% to 4.7%) counties. Small unemployment rate increases were seen in Washakie (up from 4.7% to 5.2%) and Sheridan (up from 4.7% to 5.0%) counties.

Fremont County reported the highest unemployment rate in March at 5.5%. It was followed by Park (5.2%), Washakie (5.2%), and Sheridan (5.0%) counties. The lowest unemployment rates were found in Teton (2.5%), Niobrara (2.5%), Goshen (2.9%), and Albany (3.0%) counties.

Total nonfarm employment (not seasonally adjusted and measured by place of work) rose from 274,900 in March 2017 to 278,200 in March 2018, an increase of 3,300 jobs (or 1.2%; not a statistically significant change).

Seasonal adjustment is a statistical procedure to remove the impact of normal regularly recurring events (such as weather, major holidays, and the opening and closing of schools) from economic time series to better understand changes in economic conditions from month to month.

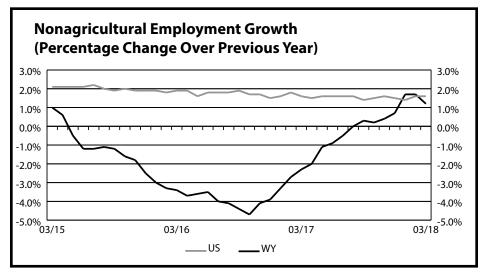

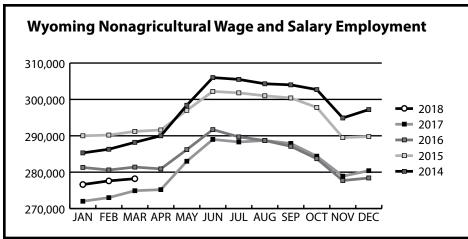

Current Employment Statistics (CES) Estimates and Research & Planning's Internal Estimates, March 2018

by: David Bullard, Senior Economist

Industry Sector	Research & Planning's Internal Estimates	Current Employment Statistics (CES) Estimates	N Difference	% Difference

Economic Indicators

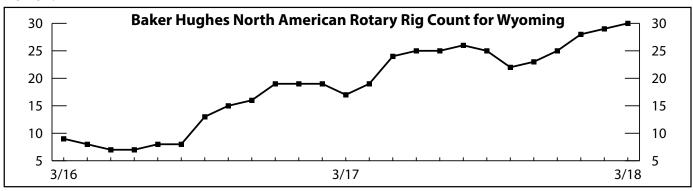

by: David Bullard, Senior Economist

The Consumer Price Index for transportation rose 3.9% from a year earlier, probably reflecting higher gasoline prices.
